Jan Vaes, Technology Director at Hydrogenics

storage.

Jan Vaes holds a master in Materials science and Engineering from the KU Leuven (Belgium) and completed his PhD in the field of electrochemistry there as well. After four years as a corrosion consultant, providing advice materials as an expert to the chemical and pharmaceutical industries, he joined Imec as a R&D engineer. He finally joined Hydrogenics in 2012, where he's now Technology Director, leading the technology engineering team, coordinating the development of alkaline and PEM water electrolyzers systems from basic component research to full system integration. Over the past four years Hydrogenics installed five MW scale power to gas sites for renewable energy
